ABSTRACT OF THE DISCLOSURE

A method and system of menu browsing for a mobile phone is provided. First, an image in a sequence is designated and displayed on a display device of the mobile phone. The designated image corresponds to a menu option. Thereafter, a directional signal is received. Then, a predetermined number of images after or before the designated image in the sequence are displayed in order on the display device according to the signal and sequence, the most recent image is kept to be displayed on the display device, and an option page corresponding to the displayed image on the display device is linked to if a confirmation signal is received.
